

Quadralite Thea 450 panel LED Kit

The Quadralite Thea 450 LED Panel Kit is a professional lighting set ready to use in the studio straight out of the box. A set of two powerful LED panels can be placed on tripods with a maximum height of 195cm so you'll be able to create a fully professional studio even in a small space.

The set is based on two Quadralite Thea 450 LED lamps which are designed to fill a large area with soft, studio light. Its key feature is a large light surface which combined with the high power of the panel, guarantees a perfect light filling of the scene, so you can get a professional effect on your photographs or videos.

This panel combines high light output with low weight (only 1403g) and depth (only 6cm) which makes it easy to transport and place it in any, even small studio space.

The Thea 450 LED panel is equipped with a dedicated diffusion surface thanks to which the light emitted by the lamp is extremely soft, thus eliminating the harsh shadows on the objects. With this lamp, you will achieve a fully professional studio effect without any additional light modifiers.

The lamp is made of LEDs with high CRI>95 colour rendering index. The panel emits a strong beam of light without any flicker effect, with the possibility to adjust the lamp's colour temperature in the range of 3200K-5600K ($\pm 300K$) using a dedicated knob on the back of the panel. This function will allow you to adjust the lamp's light to the existing light, thus achieving a natural effect on your recording.

Thanks to the built-in mount point equipped with a $\frac{1}{4}$ inch thread, you will be able to mount the panel straight to your mounting systems such as tripod. The set includes two tripods with a maximum height of 195cm, which thanks to their special design remain extremely light and compact, allowing for trouble-free operation in any space. The whole kit can be safely stored and transported in a convenient case included in the kit.

The power supply of Thea 450 LED panel is possible thanks to two popular batteries type NP-F guaranteeing long lamp operation and dedicated AC power supply included in the kit.

Selling Points:

- Kit ready to work in the studio right out of the box
- Extremely strong output (3650lux – one panel) to light a large space
- Built-in diffusion layer makes light soft and even which makes it perfect to capture people or products
- The soft light emitted by the panel is perfectly suited for capturing both people and products.
- Simple and intuitive operation with 2 knobs at the back of the panel
- Brightness adjustment from 10% to 100% to match your needs
- Colour temperature adjustment allows you to match the light to the scene
- True colour reproduction thanks to high CRI>95
- The soft light emitted by the panel is perfectly suited for

Key features:

- two Quadralite Thea 450 LED panels
- two 195cm high tripods (included in the set)
- extremely strong light output of 3650lux
- built-in soft diffusion layer
- maximum power of 16W
- high colour rendering index CRI >95,
- smooth colour temperature adjustment 3200K-5600K $\pm 300K$,
- battery charge level indicator
- large light-emitting surface area
- stepless brightness adjustment in the range of 10-100%
- compact size and weight
- high brightness of emitted light
- no flickering effect
- powered by the popular NP-F type batteries

- capturing both people and products
- Compact design allows the panel to be used directly on the camera or rig

Set includes:

- 2x Quadralite Thea 450 LED Panel
- 2x Quadralite 195cm light stand
- 2x AC power supplies
- manual
- bag

Warranty: 2 years
