

Irix Edge 100 SR Reverse Gradual ND

Product card

The Irix Edge Reverse Gradual Filter combines the features of a hard and soft filter, particularly finding its application when it comes to sunset and sunrise photography.

How They Work?

The Irix Edge Reverse Gradual Filter is a relatively new type of filter that combines the features of a hard and soft filter, particularly finding its application when it comes to sunset

and sunrise photography. Probably every one of us has tried at least once to capture that beautiful view of the sun emerging from the horizon, after which we end up encountering a problem; either the frame was visible, the sun and the horizon has turned into a white spot, or we've managed to somehow capture the sun complete with a beautiful façade of pastel colour background of black emptiness.

However, the design of this filter allows us to eliminate such problems, being a filter that is half transparent with hard edge (Hard Gradual), and then gradually reducing the density (Soft Gradual). Such a construction ensures that it covers the narrow spectrum of the frame within the horizon line, and so allowing us the possibility to ensure the correct exposure of the photograph.

Quality that you can trust

Only the highest quality optical glass is used during the production of Irix Edge filters; with 99.6% light transmission.

Multilayer anti-reflective coatings have been applied on both sides of each filter,

which helps produce images without flaring, with excellent contrast and sharpness at the same time.

Super Resistant (SR) optical glass

This technology makes the filter extremely resistant to damage – toughened optical glass covered with special nano-coating makes the filter survive virtually anything. Available densities:

- Irix Edge 100 SR Reverse Gradual ND16 (1,2)
100x150mm
- Irix Edge 100 SR Reverse Gradual ND8 (0,9) 100x150mm

Technical data

Type	Neutral Density, Reverse Graduated
ND Number/Light	Irix Edge 100 SR Reverse Gradual ND16 (1,2) Irix Edge 100 SR Reverse Gradual ND8 (0,9)
Standard	100x150mm
Thickness	2 mm
SR optical glass	Yes
System	Irix EDGE IFH-100 and other holders in the 100 mm standard
Coatings	Anti-reflective – double-sided, multi-layered
Special coatings	NANO – double-sided, multi-layered

Product name	EAN code
