Akira Bouncer V1

Akira Bouncer V1 is the best bounce attachment for your speedlite that changes the direction of light by 90 degrees. This softens the light and distributes it more evenly on the area, keeping the light loss at the minimum level.
Akira Bouncer V1 will be useful in situations where there is no possibility of bouncing light from ceilings or walls. V1 will also be helpful when direct light, straight from the flash head is unwanted. V1 will make the shadows softer and lightly filled with light, which will positively affect the pictures.
Akira Bouncer V1 is made entirely of plastic therefore it is lightweight and can be easily transported in a backpack, bag or even pocket. Two sets of velcro tapes are supplied in the box for fast end easy assembly.
