

Genesis PLL - XT1 Plate

PLL-XT1 Specification:

- Mount: Arca-Swiss
- Height: 69mm
- Length: 140mm
- Mounting Width: 38mm
- Width at its widest place: 49mm
- Warranty: 6 years

The plate is compatible with Fujifilm X-T1 cameras

Genesis PLL-XT1 is an "L"-type quick-release which comprises two parts. Allows for quick and comfortable attachment of a camera on the tripod, either in horizontal or vertical position. Significantly facilitates shooting portraits and taking panoramic photos built up of horizontal frames.

Using this type of a clamp reduces the frame shifting effect which happens when a photographer changes the layout from horizontal to vertical plane or vice versa.

The plate has been designed especially for Fujifilm X-T1 camera and perfectly adapts to the shape of the casing, ensuring high stability of the mount. Made of lightweight and durable aluminum alloy used in aviation and secured against corrosion and scratching by anodizing treatment. The use of an edge protecting against unwanted camera movements plus perfectly adjusted shape of the plate helped to eliminate anti-slip rubbers and increased the rigidity of the connection between the quick-release and a camera. One end of the plate features a small "ear" for attaching a strap.
