

Genesis Subro CW

SUBRO-CW is an additional load for SUBRO and SUBRO-P shoulder racks. Mounting the SUBRO-CW transfers the center of gravity to the camera operator's shoulder, improving the stability of the set while relieving the hands. The use of SUBRO-CW is recommended when the total weight of the camera and accessory equipment mounted on a tripod is greater than 1kg. In the set with a load (1.85kg) there is a mounting plate, a set of screws and an Allen wrench.
