

Light Pollution

FEATURES

The Irix Edge Light Pollution (SE) filter is a filter designed for such conditions by being able to eliminate the yellowish colours that often dominate our pictures. With this filter, we can achieve significant colour improvement, improved overall contrast and sharpness.

DESCRIPTION

For nightscape photography

The Irix Edge Light Pollution (SE) is designed for nightscape photography – it eliminates the yellowish colours that often dominate our pictures. With this filter, we can achieve:

Significant colour improvement

A filter that guarantees the best possible colour rendering for the night

Improved overall contrast

The filter removes the yellowish haze present so that the whole image gains much more contrast

Filters available with Super Resistant (SR) optical glass

This technology makes the filter extremely resistant to damage—toughened optical glass covered with special nano-coating makes the filter survive virtually anything.

Perfect at any time

The Irix Edge Light Pollution (SE) filter comes in handy every time we want to take a photograph near to, or in, the city. For example, city landscapes, street photography, or astrophotography.

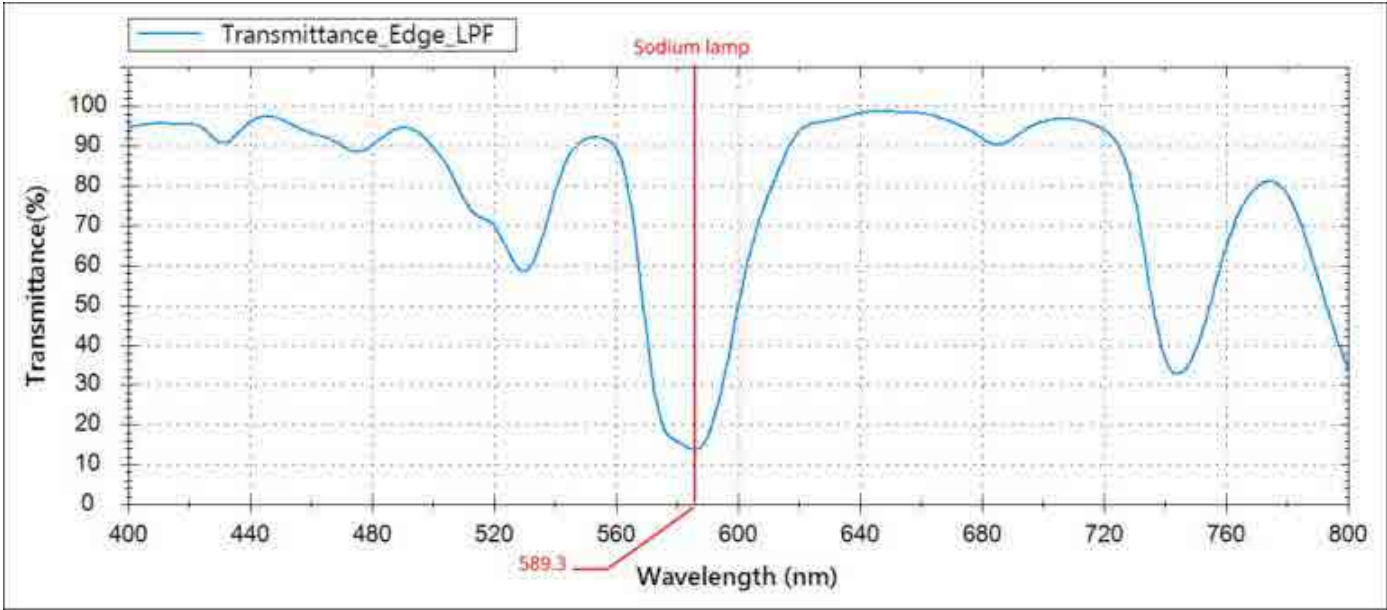

Control the colours at night

The dominating yellowish colour that can be seen in the picture – when taken at night – is the result of sodium lamp streetlighting. The Irix Edge Light Pollution filter shuts out this yellowish haze.

This type of filter can be successfully used in the city, in the urban landscape, or with photography of the night sky when we want to capture the stars, or the Milky Way, with natural colours.
