

Quadralite Collapsible Reflector with Grip Transparent 90x120cm

The reflector is one of the simplest and most useful light modifiers. It can be used both inside and outside the photo studio, in addition to outdoors. It is useful not only for photographers but also for filmmakers, regardless of whether they are professionals or amateurs.

Quadralite diffusion reflector is an excellent tool for modeling light in all conditions, enclosed in a small case.

The diffusion surface is a white screen; transmitting soft and highly scattered light, it can be used to soften the light from a flash or sun, and it does not change the color of the light passing through it.

Thanks to the use of two handles, the reflector allows for a comfortable grip, even in adverse conditions, i.e. during demanding outdoor sessions. The handles are moulded for ergonomic grip, making them very comfortable and non-intrusive. The handles also allow you to mount the reflector quickly and easily, not only to stands and tripods, but also to everyday objects that allow you to attach the reflector to.

Kit includes:

- Quadralite Diffusion Reflector with grip 90x120cm
- Cover case

Warranty:

- 2 years

Specifications

Model	Quadralite Diffusion Reflector with grip 90x120cm
