

## Quadralite Deep Space 105 White Umbrella Diffuser

The Quadralite Deep Space 105 White Umbrella Diffuser is a surface that increases the dispersion of light reflected from the umbrella. This product turns Quadralite Deep Space spherical umbrellas with a diameter of 105cm into a portable softbox, providing soft and pleasant light for portrait photography, among other uses. The diffuser can be easily attached to the umbrella during setup. The opening in the diffuser allows the set to be used with both Quadralite flash lamps (studio and on-location) and continuous light fluorescent lamps. Mounting the diffuser on a reflecting umbrella produces strong, directed light that is evenly diffused. This type of lighting looks much more natural in photos and avoids creating harsh shadows.

### Product features:

- It provides strong light diffusion
- Perfectly fits the edge of the umbrella
- Compatible with any Quadralite Deep Space 105 umbrella
- Easy and quick mounting on any Quadralite stand

### Warranty:

- 2 years
