

Quadralite Deep Space 165

white umbrella diffuser

Quadralite Deep Space 165 white umbrella diffuser is a material that increases the diffusion of light reflected from the umbrella. Thanks to this diffuser, Quadralite Deep Space spherical umbrellas will become a mobile softbox that gives soft and pleasant light in portrait photography but not only. The diffuser can be easily put on the umbrella while unfolding it. The hole in the diffuser allows the set to be used with both Quadralite flash lamps (Studio and Reporer) and with constant light fluorescent lamps. The diffuser mounted on the reflecting umbrella allows you to receive strong, directed light, evenly dispersed. Such lighting looks much more natural in photos and does not create sharp shadows

Description:

The diffuser is made of high-quality material, resistant to high temperatures, it does not change its color during use. Quadralite Deep Space 165 white umbrella diffuser provides excellent light diffusion and guarantees long-lasting, satisfying work.

Quadralite Deep Space umbrellas are an extremely universal light modifier, they allow you to increase the incident light, thanks to the diffuser the light is additionally softened, creating a unique look of the photographed scenery.

Quadralite Space 165 transparent parabolic umbrella is sold with the cover that facilitates the umbrella transportation and provides additional protection against dirt and damages.
